

**Intelligent System for Independent living and SEIfcare  
of seniors with cognitive problems or Mild Dementia**

European Commission  
Information Society and Media

## Invitation / Call for presentations

### **Intelligent System for Independent living and SEIfcare of seniors with cognitive problems or Wild Dementia (ISISEMD)**

#### **EU Project 2<sup>nd</sup> Workshop**

**:: To be held in National Technical University of Athens,  
Greece**

**August 29, 2011, Athens, Greece**

#### **:: Scope**

The aim of the ISISEMD project is to provide a pilot of innovative intelligent set of scalable services that will support the independent living of elderly people in general and in particular the group of elderly with cognitive problems or mild dementia and at the same time to support the formal and informal caregivers in their daily interaction with the elderly.

ISISEMD services improve the elderly ability for self-care by support for their basic daily activities in way that prevents health risks in their homes. The services also strengthen the daily interaction with their social sphere - partners and relatives, friends and care-givers, giving them the feeling of safety and preventing their social isolation. Last but not least, their cognitive training and activation are strengthened.

To prove wide applicability in Europe, the pilot is being validated and tested in realistic conditions for 12-month period in four Member State regions which have extensive experience from existing tele-care-at-home services for elderly.

The pilot set of services integrate: a) several partial services, b) already tested prototype, and c) completed R&D work.

The operation is being evaluated with three target end-user groups - elderly, formal and informal caregivers, addressing thus the diverse requirements of these groups.

The pilot services contain 3 different service bundles (basic

services, intermediate and high level) that allow for escalation of the service provided to the end-users, based on their needs and providing different pricing schemes.

The ISISEMD pilot has strong user centric focus and offers a wide range of individual activities that will allow for the e-Inclusion of the elderly people in every day social life.

The 2<sup>nd</sup> ISISEMD Workshop will hold various presentations from stakeholders in the area of remote care systems and will host a round table discussion to exchange experiences and lessons learned from the various participants.

#### **:: Participation Guidelines**

Participation in the 2<sup>nd</sup> ISISEMD workshop is free. You are invited to express your interest to participate and make your presentation in the Workshop by sending an email to Antonis Litke ([alitke@converge.gr](mailto:alitke@converge.gr)), and indicate the title of the presentation and the relevance to the project. Especially relevant ongoing or finished projects from the ICT Policy Support Programme are strongly encouraged to participate. Your presentation should not exceed 20 minutes allowing enough time for question and answers.

#### **:: Dissemination**

All workshop papers will be published in the project blog site: <http://isisemd.blogspot.com/>.

#### **:: Important Dates**

Expression of interest to participate:	July 15, 2011
Final Workshop Program:	July 26, 2011
Presentation submission:	August 22, 2011

#### **:: Organizing Committee**
